Problem Statement

Current courier operations rely heavily on manual processes, creating operational inefficiencies and customer dissatisfaction.

Manual Record Keeping

Organizations struggle with maintaining accurate shipment records without digital systems

No Real-Time Tracking

Customers cannot monitor their packages in transit, leading to uncertainty and frustration

Communication Gaps

Limited interaction between courier services and customers creates service delays

Error-Prone Processes

Manual data entry and shipment handling increase mistakes and operational costs

Made with GAMMA

Proposed Solution

ConsignX is a comprehensive web-based courier management system that transforms manual operations into automated, efficient workflows.

Key Benefits

- Automated shipment tracking and record management
- Real-time status updates for all stakeholders
- Centralized customer, shipment, and billing data
- Improved operational efficiency and accuracy
- Enhanced customer satisfaction through transparency

Made with GAMMA

System Overview

A multi-role web application designed to streamline courier operations from dispatch to delivery.

Web-Based Platform

Accessible from any device with internet connectivity, ensuring flexibility and remote management capabilities

Complete Courier Management

Handles all aspects of courier operations including tracking, reporting, and shipment lifecycle management

Multi-Role System

Three distinct user roles–Admin, Agent, and Customer–each with tailored dashboards and permissions

Made with GAMMA

System Modules

Admin Dashboard

- System login and security management
- Complete shipment oversight
- Agent creation and management
- Customer database administration
- Comprehensive reports and analytics
- Real-time status tracking

Agent Dashboard

- Branch-specific login credentials
- Create new shipments
- Manage branch shipments
- View branch status overview
- Generate shipment reports
- Download tracking documents

User Dashboard

- Account registration and login
- Track shipments by ID
- View real-time status updates
- Print tracking details
- Access delivery history

Made with GAMMA

Key Features

01

Real-Time Shipment Tracking

Live updates on package location and status throughout the entire delivery journey

02

Role-Based Dashboards

Customized interfaces tailored to each user role's specific needs and permissions

03

Report Generation

Export detailed shipment reports to Excel format for analysis and record-keeping

04

Secure Authentication

Protected login system with encrypted credentials and session management

05

Status Updates

Automated tracking status progression: Pending, In Progress, Delivered

Made with GAMMA

Dashboard Overview

Admin Dashboard

Full system control with comprehensive analytics, user management, and operational oversight

Agent Dashboard

Branch-specific data management with shipment creation and reporting tools

User Dashboard

Simple tracking interface allowing customers to monitor shipments using tracking IDs

System Architecture

Three-tier structure providing appropriate access levels and data security for each user type

Made with GAMMA

Conclusion

Operational Excellence

Eliminates manual processes, reducing errors and improving overall efficiency

Enhanced Tracking

Real-time visibility into shipment status for better customer experience

Scalable Design

Architecture ready for future enhancements and expanded functionality
